Model Driven Engineering and Ontology Development

Dragan Ga#evic, Dragan Djuric, Vladan Deved#ic

Model Driven Engineering and Ontology Development Dragan Ga#evic, Dragan Djuric, Vladan Deved#ic

Defining a formal domain ontology is considered a useful, not to say necessary step in almost every software project. This is because software deals with ideas rather than with self-evident physical artefacts. However, this development step is hardly ever done, as ontologies rely on well-defined and semantically powerful AI concepts such as description logics or rule-based systems, and most software engineers are unfamiliar with these. This book fills this gap by covering the subject of MDA application for ontology development on the Semantic Web. The writing is technical yet clear, and is illustrated with examples. The book is supported by a website.
